

SEGMENTAL RETAINING WALL CORNER BLOCKS (Last Updated May 16, 2019)

There are two questions that commonly come up specific to SRW corners, namely:

1. WHAT IS A LEFT AND RIGHT CORNER

The easiest way of remember what is a left versus a right corner is to look at the unit along its long length with your hands in an L-Shape, fingers down.

Right hand matches split faces
– right corner

Left hand matches split faces
– left corner

2. WHAT IS THE AREA OF A CORNER?

Remember that when installed in a wall, two sides of a corner are visible (the front and one side face). So the area of coverage of a corner is the sum of the two visible faces.

Using a Proterra corner as an example, the two exposed faces measure 1m x 0.185 m and 0.375 m x 0.185 m – the total area of the corner is therefore $0.185 + 0.069 = 0.254$ square metres.
